

Autonomous Systems honoured at Busworld Europe 2025 for its smartbus

Europe's first smartbus - an ordinary bus upgraded by SmartDEPOT™

Brussels, Belgium - October 3, 2025 - Autonomous Systems is honoured by Busworld for the smartbus it showcased at Busworld Europe 2025. The recognition highlights the company's vision for **smartbuses**: ordinary buses upgraded by **SmartDEPOT™** so they can move, park and charge by themselves inside the depot.

Instead of chasing flashy street demos, Autonomous Systems focused on where autonomy helps right now - the depot. In simple terms: **smartbus = ordinary bus + SmartDEPOT™**.

"For a decade, autonomy looked like a show. We designed it to work," said Jarosław Czaja, founder and CEO of Autonomous Systems. "Our smartbus isn't sci-fi - it's a better morning. It lines up, charges, and rolls out without yard chaos, so drivers spend more time with passengers."

Why it matters

- Immediate impact - no passengers on board in the depot, so it's a safer, faster place to start.
- No big rebuild - works with today's depots and mixed fleets.
- People-first - a Smartbus Coordinator oversees movements through Mission Control, turning busy mornings into calm ones.

Autonomous Systems will share full details of SmartDEPOT™ and the smartbus program at a launch event on Tuesday, October 7, 2025 at 14:30 CET (**Hall 5 Entrance – Stand 555**). To support awards-week coverage, the company offers embargoed media pre-briefs.

For editors at Busworld

- Book a 20-minute embargoed pre-brief (Oct 4–6) - talk with Jarosław Czaja and product leads.
- Request the media kit (embargoed until Oct 7, 14:30 CET) - press release and **videos**.
